Project Documentation: Roll Shop Data Entry System

1. Project Overview

The **Roll Shop Data Entry System** is a Streamlit-based application developed to support manual and automated data entry for operations at a steel manufacturing roll shop. The application connects to two Oracle databases to manage and monitor operational data through multiple interactive modules.

The main tabs include:

- **Grinding Details**
 - **Job Work Details**
 - **Level2 Data**
 - **SAP Purchase Details**
-

2. Navigation Flow

3. Module Descriptions

Submit Data to Grinding Details

Figure 1: Grinding Details Tab

Purpose: Record grinding operation parameters including roll IDs, diameters, profiles, inspection values, and time logs.

Backend:

- Reads and validates uploaded Excel files using `pandas`.
- Converts and inserts records into the `GRINDING_DETAILS` table in the `TPR_ROLLSHOP` Oracle database.

Frontend:

- Custom HTML table rendering for grouped headers (RA, UST) etc.
- Upload button for Excel sheet.
- Submit button for Oracle DB insertion.

Submit Data to Job Work Details

Data is successfully submitted

Figure 2: Job Work Details Tab

Purpose: Capture roll turning operation data including before/after diameters, PO/OGPR details, and action plans.

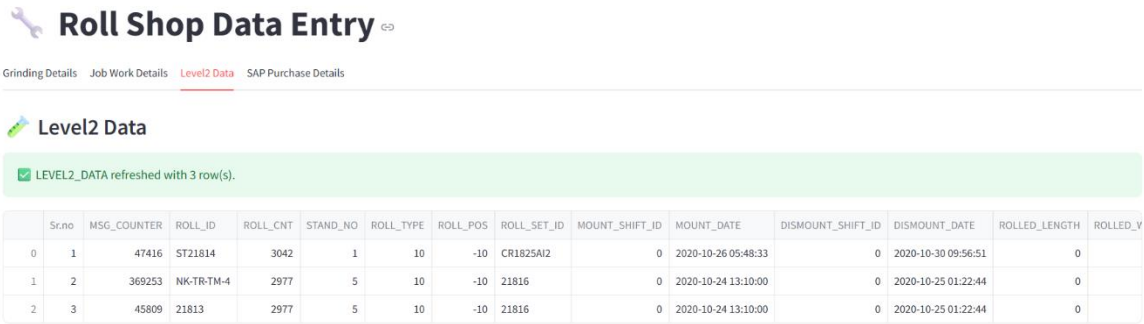

Backend:

- Validates and uploads Excel file data.
- Submits to the JOB_WORK_DETAILS table in the TPR_ROLLSHOP DB.

Frontend:

- Editable Streamlit table view.
- Excel uploader with session-based caching.

Figure 3: Level2 Data

Purpose: Automate daily import of roll operation telemetry data from PDO_ROLL_STATUS (TPMESPLTCM DB) into LEVEL2_DATA (TPR_ROLLSHOP DB).

Backend:

- Automatically fetches data from source DB.
- Checks for duplicates via MSG_COUNTER before inserting.
- Inserts only new records into the LEVEL2_DATA table.

Frontend:

- Displays all records from LEVEL2_DATA using st.dataframe.
- No user input required for submission.

Figure 4: SAP Purchase Details

Purpose: Upload and track SAP purchase records related to rolls and maintenance.

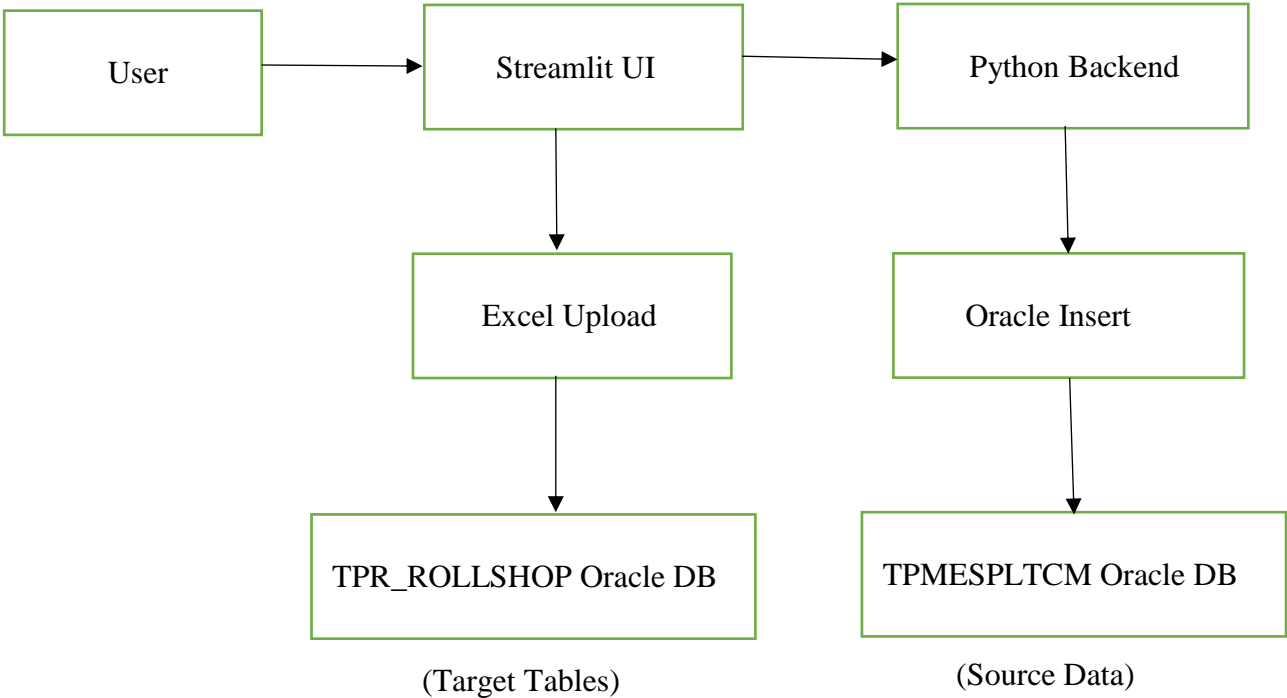

Backend:

- Upload and validate Excel files.
- Submit to `SAP_PURCHASE_DETAILS` table.

Frontend:

- File uploader.
- Table preview and submission.

4. Architecture Diagram

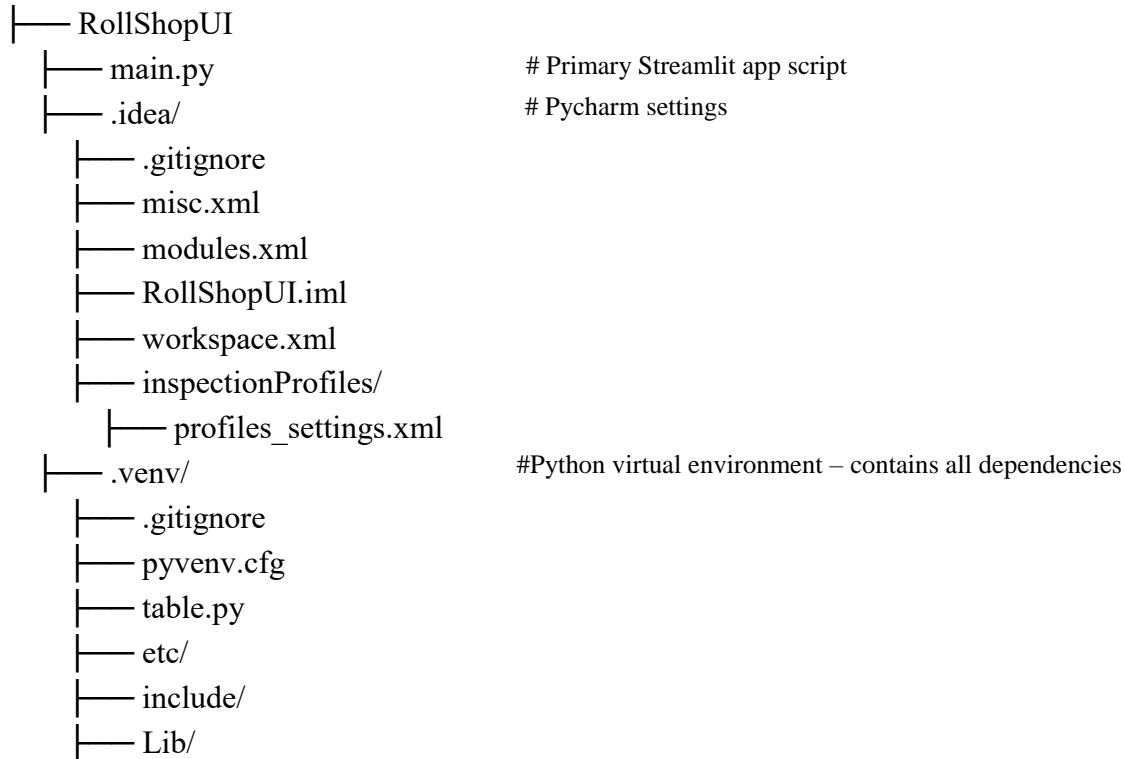

5. Technology Stack

| Component | Technology |
|--------------|-------------------------------|
| Frontend | Streamlit, HTML, CSS |
| Backend | Python, Pandas, datetime |
| Database | Oracle DB (2 instances) |
| DB Connector | SQLAlchemy (oracle+oracledb) |
| File Upload | Excel via pandas.read_excel() |

6. File Structure

RollShopUI/

7. Future Enhancements (Phase-2)

- Add user login and access control
- Integrate directly with grinding machines to automatically fetch and log grinding details
- Develop a seamless interface with SAP systems to pull and update SAP purchase details

8. Authors & Maintenance
